

ANDROID DEVELOPER INTERNSHIP PROGRAM

Task 3

Task Title:

Roadmap & Feature Prioritization

App Name: Eco-Cart

Proposed by: Ruhma Amir

1. Feature Brainstorming

I have categorized every possible feature into "Themes" to keep the list organized.

1. **User Management:** Email Login/Signup, User Profile, Saved Products (Favorites).
2. **Core Functionality:** Barcode Scanner (ML Kit), Eco-Score Display, Product Database.
3. **Social & Community:** User-submitted products (Eco-Verify), Share scores on social media.
4. **Engagement:** Personal Impact Dashboard (Total CO2 saved), Push Notifications for eco-tips.
5. **Settings/Admin:** Dark Mode, Language Selection, Feedback Form.

2. Feature Prioritization (MoSCoW Method)

This method ensures the app is functional as soon as possible.

Category	Features	Rationale
Must-Have	Barcode Scanner, Eco-Score UI, Mock Product Database.	These are the core tools; the app is useless without them.
Should-Have	"Better Pick" List, Basic Local Dashboard.	Solves the "Price" pain point identified in Task 2.
Could-Have	User Auth (Firebase), Favorites List, Dark Mode.	Nice for personalization but not needed for the first test.
Won't-Have	Global Social Feed, Real-time Price Tracking API.	Too complex for an initial internship project.

3. MVP (Minimum Viable Product) Definition

The MVP will focus on the **"Scan-to-Suggest"** loop.

- **Selected Features:**

1. **High-Speed Barcode Scanner:** (The "Input")
2. **Basic Score Logic:** Showing 3 metrics (Environment, Animals, People).
3. **Static "Better Pick" Suggestion:** Showing a cheaper/better alternative.

Why these? This is the minimum required to solve our core problem: Helping users find a better product while shopping.

4. Full App Feature Planning (Post-MVP)

After the MVP is stable, I will scale the app with:

- 1. **Cloud Backend:** Using Firebase to allow users to sync their "Impact Dashboard" across devices.
- 2. **Eco-Verify Feature:** Let users contribute to the database by snapping photos of unscanned items.
- 3. **Enhanced UX:** Adding **Dark Mode** and **Animations** (like a growing tree) to reward users for green purchases.

5. Product Roadmap (The Timeline)

Phase	Title	Duration	Key Features
Phase 1	MVP Launch	Weeks 1–2	Scanner integration, Local Product JSON, Score UI.
Phase 2	Logic & Value	Weeks 3–4	Alternative Suggestion Engine, "Budget" Tiers, Impact Dashboard.
Phase 3	Polishing	Weeks 5–6	User Authentication, UI/UX Polish, Performance Optimization.
